Wireless Local Switching Cross-Test

Date: Nov 9, 2026
Tester: Muhammad Khan
Implementer: Benjamin Popso

Expected: WPA2-Enterprise authentication, VLAN 50 DHCP, permitted connectivity, blocked VLAN 99 access, and local switching.

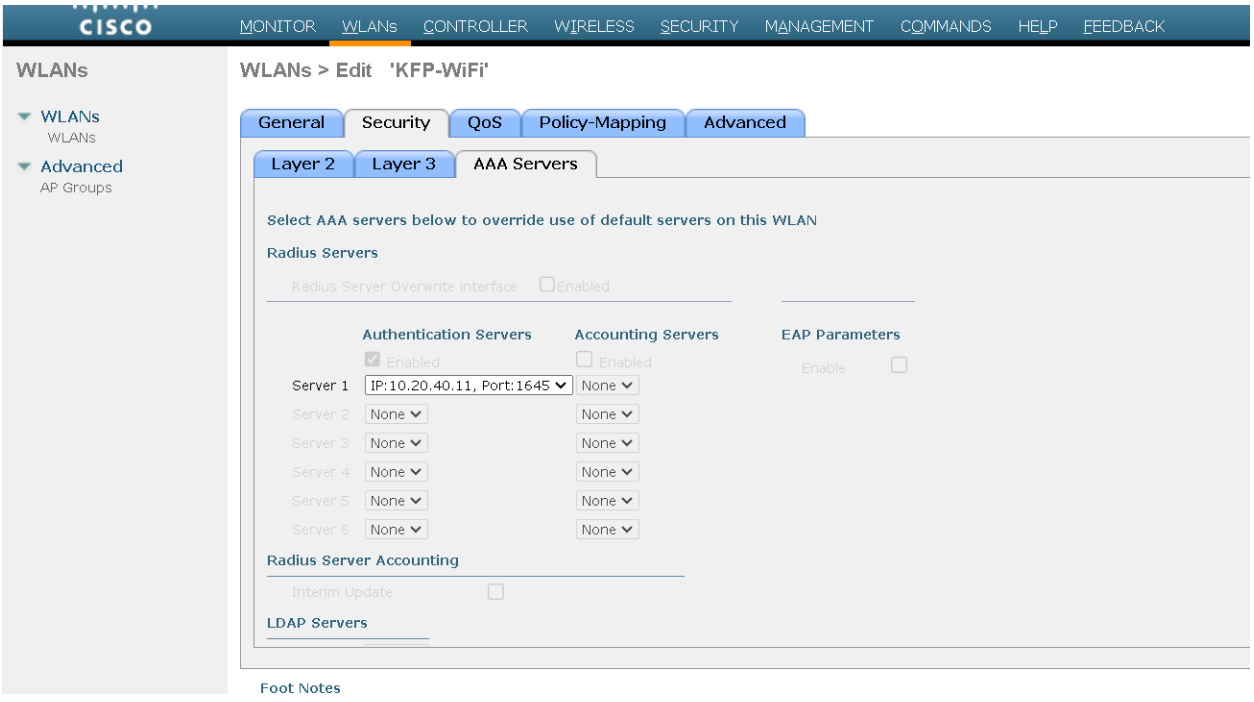

Observed: Wireless connection and RADIUS authentication settings verified. DHCP assigned 10.20.50.101, gateway 10.20.50.1, and DNS 10.20.40.10

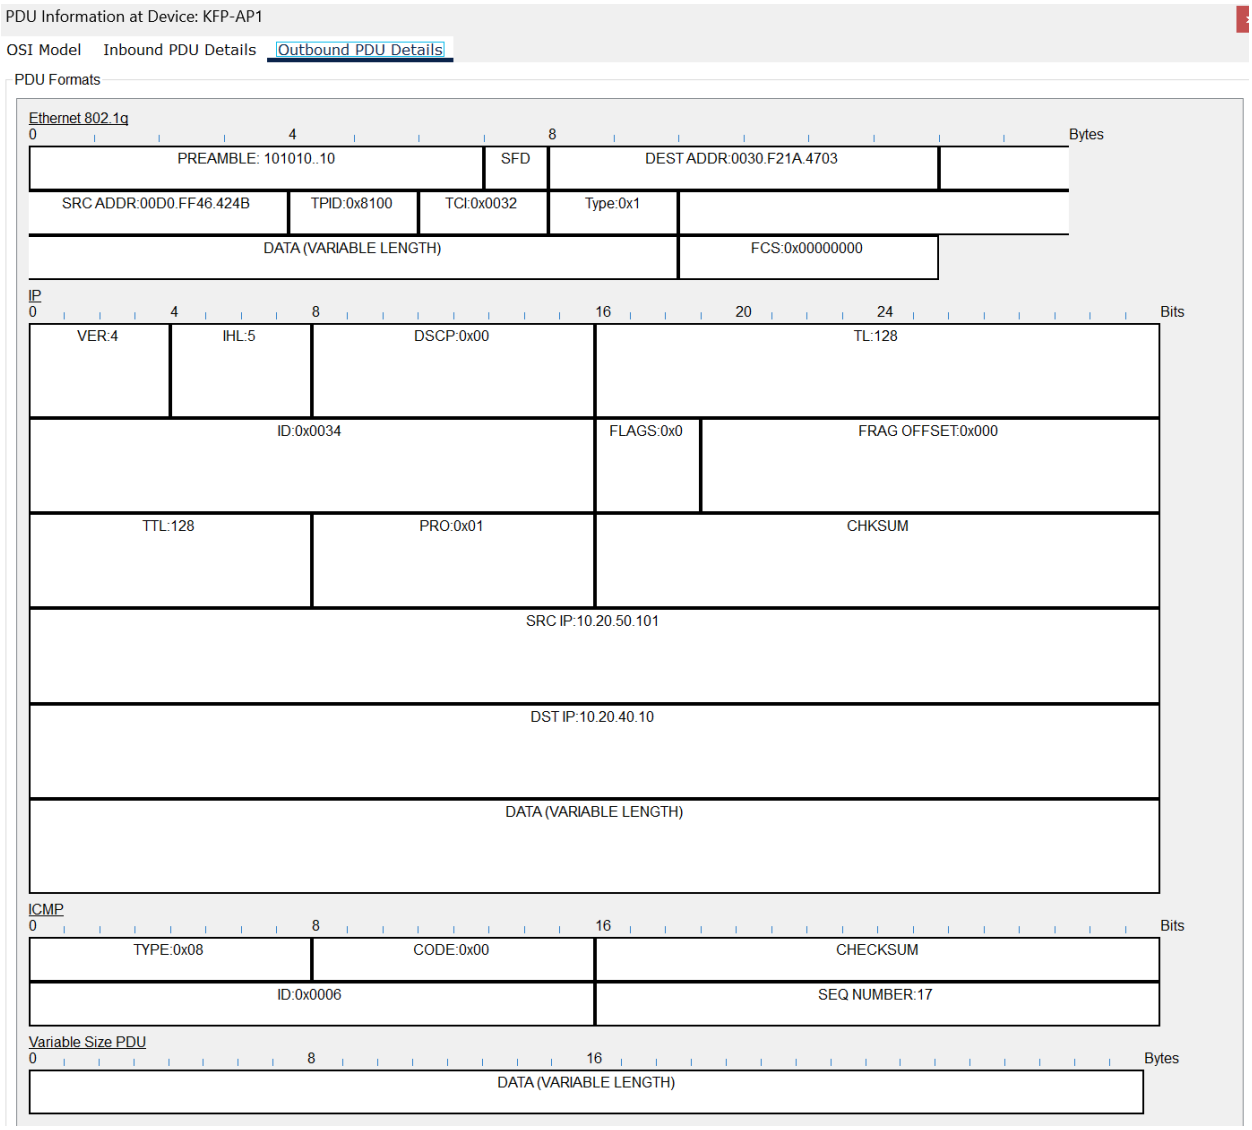

Observered; Gateway and DNS connectivity passed. Simulation confirmed VLAN 50 tagging through AP1 to SW4, bypassing WLC1.

Security: VLAN 99 access was blocked. ACL deny counter increased from 4 to 8 matches.

Status: Pass for verification tests. Access to 10.20.40.13 was denied by the wireless ACL,

Evidence: 3 screenshots show RADIUS configuration, VLAN 50 tagging, and ACL deny counters
